

**NEVOTON® ANTI-FON™ TELECOMMUNICATIONS ACCESSORY**

**Protects and supports you during use of Cellular Phones, Cordless Phones, and Wireless Communicators**

**Quadruple Patented!**

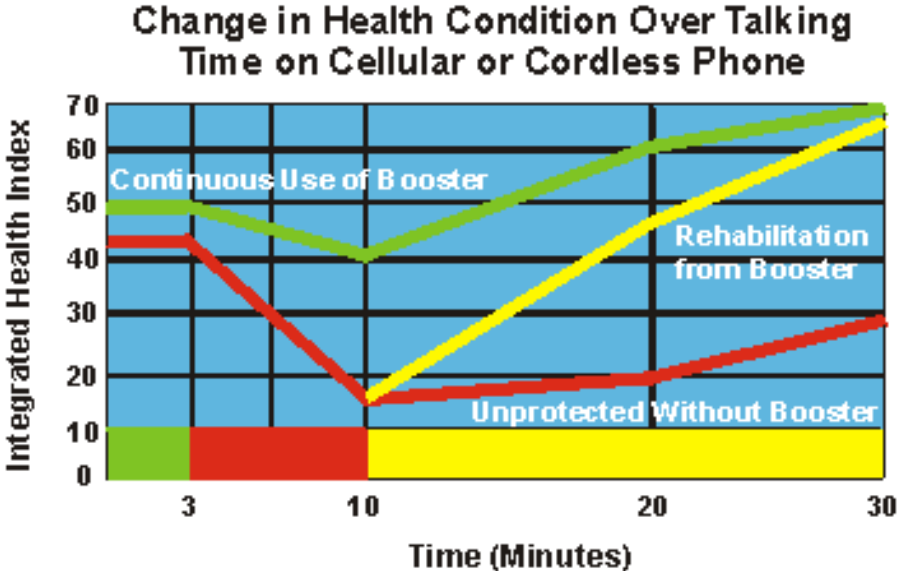

Long-term or frequent use of cellular and cordless is believed to cause significant risks to your health, presenting a special risk to business persons, corporate executives, government officials, security guards, and many types of professionals. The proximity of a receiving and broadcasting antenna near the head during telephone use results in a condensed electromagnetic field which can have effects on brain cells, red blood cells, and nerves related to the eyes and ears. This can increase the occurrence of headaches, eye strain, and mental fatigue, and creates a risk of more serious long-term health problems.

The Nevoton® Anti-FON™ Booster is an essential accessory for:

- Cellular Phones
- Cordless Phones
- Handheld Radio Communication Devices

The following chart from the manufacturer Nevoton® shows the effect which talking on a cellular or cordless phone has on your health over short time periods during one conversation:

After only 3 minutes of talking, the cellular or cordless phone radiation begins to dramatically lower your immune system and overall physical condition. Without protection, after only 10 minutes of talk time, your health condition is reduced to only 40% of its previous level. With the quadruple-patented Anti-FON™ Booster protecting you, your mental and physical performance capabilities actually increase to a whopping 160% of their previous level, even after a whole 30 minutes of talk time, and continues to increase!

It is an ideal addition to the communications equipment constantly carried and relied upon by various professionals, increasing their alertness, mental sharpness, physical strength and reactivity, and improving their overall work performance.

The Anti-FON™ is designed to look and feel like a high-tech communications accessory, similar in image and appearance to blend in with your other commonly used technologies.

**Disclaimer:**

Nevoton® magnet products are not intended for the diagnosis, cure, mitigation or treatment of any disease nor any other medical condition, and are not intended to affect the structure or any biological function of the body. ITEM offers Nevoton® products for experimental use. Although ITEM finds the products useful, we recommend that you evaluate objective research on magnet therapy to make an informed decision.
